## SUMMER INTERNSHIP

# Python Programming Internship

Professional Internship Presentation

## INTERNSHIP DURATION

**1 July 2026 – 30 July 2026**

B.Tech (Computer Science & Engineering) • 3rd Semester • Section 2CSE36

## STUDENT CREDENTIALS

**Anant Chaudhary**

ENROLLMENT / ROLL NO.

**25SCS1003004407**

PROGRAM & SEMESTER

**B.Tech (CSE) • 3rd Semester**

## HOST ORGANIZATION

**CodeAlpha**

Python Programming

# Candidate & Internship Overview

Key details of the internship

01

## Student Name

Anant Chaudhary

02

## Roll Number

25SCS1003004407

03

## Program

B.Tech (Computer Science & Engineering)

04

## Academic Semester

3rd Semester • Section 2CSE36

05

## Organization

CodeAlpha

06

## Internship Domain

Python Programming

**Session: 2025–29 • Duration: 1 July 2026 – 30 July 2026**

# Organization Profile

Internship host and practical learning context

## CodeAlpha

### Virtual Internship Program

- The internship was completed in the Python Programming domain.
- The program focused on practical task-based development.
- Projects were implemented and maintained in individual GitHub repositories.
- The work emphasized programming fundamentals and working console applications.

### INTERNSHIP FOCUS

#### Python 3

Programming

#### GitHub

Project hosting

#### CLI Apps

Practical tasks

#### Documentation

Submission

# Problem Statement & Internship Context

Why the assigned projects were useful

## The Challenge

- Translate task requirements into working Python programs.
- Handle user input and invalid cases without breaking the flow.
- Use appropriate data structures and control logic.
- Produce clear, repeatable console output.

## The Solution Scope

- Build three independent Python applications.
- Apply validation, loops, conditions and collections.
- Use file handling where required.
- Test each program through interactive execution.

Understand

Implement

Validate

Test

Document

# Core Project Objectives

Skills practiced across the internship

P

## Python Fundamentals

Variables, input, strings, lists, dictionaries and control flow

V

## Validation

Handle invalid symbols, repeated guesses and unexpected inputs

F

## File Handling

Generate and save portfolio output to a text file

L

## Logic & Loops

Use conditions, while loops and repeated program states

D

## Development Practice

Break requirements into steps and test the final behavior

G

## GitHub Documentation

Maintain separate repositories for completed tasks

# Technologies & Python Toolchain

Core technologies used in the submitted projects

01

## Python 3

Primary programming language

02

## Lists & Dictionaries

Store words, prices and portfolio data

03

## Functions

Organize reusable chatbot logic

04

## Loops & Conditions

Drive game and interaction flow

05

## Random Module

Select a word for Hangman

06

## File Handling

Write portfolio summary to portfolio.txt

**Toolchain: Python 3 • GitHub • Command-line execution**

# Project Workflow

Common development flow followed for the internship tasks

The three projects use the same disciplined cycle while applying different Python concepts.

**Input**

**Process**

**Validate**

**Output**

# Project 1 — Stock Portfolio Tracker

Python console application for portfolio calculation

## Stock Portfolio Tracker

**Technology:** Python 3

**Core concepts:** Dictionary, loops, conditional statements, user input, file handling

- Accept stock symbols and quantities.
- Validate symbols against predefined prices.
- Calculate individual and total portfolio value.
- Save the portfolio summary to portfolio.txt.

### WORKFLOW

Input stock

Validate

Quantity

Calculate

Save

# Projects 2 & 3

Interactive Python applications

C

## Basic Chatbot

Rule-based conversation with predefined responses, help command and exit handling.

- Normalize user text
- Match conditions
- Generate response
- Continue / Exit

H

## Hangman Game

Randomly selects a word and lets the player guess letters with validation and a six-error limit.

- Choose word
- Display hidden word
- Validate guesses
- Win / Lose

## Key learning from both projects

Interactive input • String handling • Functions • Randomization • Repeated state updates • Validation

# Key Projects & Demonstrated Skills

Evidence of practical Python development

1

## Programming

Python 3 syntax, functions and control structures

2

## Data Handling

Lists, dictionaries and strings

3

## Validation

Input checks and repeated-guess handling

4

## File I/O

Persistent text output for the portfolio tracker

5

## Problem Solving

Requirement-to-implementation workflow

6

## Version Control

Separate GitHub repositories for each task

**Submitted repositories** [github.com/anantwinchester/CodeAlpha-StockPortfolioTracker](https://github.com/anantwinchester/CodeAlpha-StockPortfolioTracker) • CodeAlpha-BasicChatbot • CodeAlpha-HangmanGame

# Certification & Completion Proof

Official internship completion evidence

## CodeAlpha Completion

- Internship domain: Python Programming
- Internship duration: 1st July 2026 – 30th July 2026
- Completion documents issued on 31st July 2026
- Certificate of Completion and Letter of Recommendation received

The completion email screenshots are included in the Internship Report as proof of communication and document issuance.

### DOCUMENTS

01

**Completion Certificate**

02

**Letter of Recommendation**

03

**Completion Email Proof**
